[Bootrec Rebuildbcd Total Identified Windows Installations 0](#)

The error reported was Total identified Windows Installations: 0 In the end the fix was from the command prompt option, but we had to go into C:WindowsSystem32Config and rename the registry files (Default, Sam, Security, Software, System), eg.. From there you can fix the drive letter order if its got changed, remove unnecessary drive letters.

At the prompt, execute the bcdedit command as shown and then press Enter The bcdedit command is used here to export the BCD store as a file: bcdbackup.. Then copy the replacement files from the Regback subfolder where there is a recent backup.. You should see one of the following messages at the command line This result most likely means that Windows installation data in the BCD store exists but bootrec couldnt find any additional installations of Windows on your computer to add to the BCD.. Try rebuilding the BCD again by executing the following, followed by Enter At the Add installation to boot list question, type

Enter Y or Yes, followed by the Enter key. [Joe Mac 2 Lost In The Tropics Download](#)

However, renaming the existing BCD accomplishes the same thing since its now unavailable to Windows, plus provides you yet another layer of backup, in addition to the export you did in Step 5, if you decide to undo your actions.. NOTE - Looks like since Windows 10 version 1803, Microsoft are no longer creating a backup in Regback.. 1 Lenovo Laptop Weve just had a Windows 8 1 Lenovo laptop that stopped booting It reported attempting Automatic Repair and kept failing and rebooting through the same cycle.. Assuming that an issue with the BCD store was the only problem, Windows should start as expected.. At the prompt, execute the attrib command exactly like this What you just did with the attrib command was remove the hidden, read-only, and system attributes from the file bcd. 34bbb28f04 [How To Get A Protractor On Microsoft Word](#)
